

### Caution - Pirri-pirri bur

Pirri-pirri bur grows throughout the dunes. It is very likely to become matted in clothing and fur, especially between July and October.

Pirri-pirri bur is a non-native plant introduced from New Zealand which has become established here. It rapidly spreads and has a negative impact on our native wildlife.

**Please ensure that it is not spread to other sites by checking your clothing and pets and removing any burrs before you leave Lindisfarne.**

Thank you for your cooperation
